

ARJUN MEHTA

Principal Technology Architect | Enterprise AI Infrastructure | Cloud Architecture | Distributed Systems

Location: Bengaluru, India **Nationality:** Indian **Age:** 43

PROFESSIONAL SUMMARY

Technology architect with approximately 19 years of experience in enterprise software, cloud infrastructure, distributed systems and large-scale data platforms. Experience spans India, Singapore, Germany and the United States across financial services, telecommunications, logistics and manufacturing programs. Core areas include cloud architecture, distributed systems, enterprise data platforms, API architecture, AI infrastructure, platform engineering, technical leadership, cloud migration and large-scale system modernization.

EDUCATION

2006–2008	Indian Institute of Technology Madras M.Tech — Computer Science and Engineering Thesis: "Scalable Distributed Systems Architectures"
2002–2006	Anna University B.E. — Computer Science and Engineering

EMPLOYMENT HISTORY

Principal Technology Architect — GlobalTech Systems Pvt. Ltd. (2018–Present)

Architecture of distributed enterprise platforms; cloud migration programs; technical architecture reviews; platform reliability; API governance; AI infrastructure; mentoring senior engineering teams; technical decision-making across multiple programs. Currently provides architectural guidance to approximately 35 engineers across four teams. Direct reports: 8.

Senior Solutions Architect — CloudSphere Technologies (2013–2018)

Worked on cloud migration, distributed data platforms, enterprise APIs, containerized applications and infrastructure modernization. Led architecture activities for programs involving multiple enterprise customers.

Software Architect — TechNova Solutions (2009–2013)

Worked on enterprise middleware, integration platforms, distributed systems and data processing.

Senior Software Engineer — Infoware Systems (2006–2009)

Software engineering work involving enterprise systems and distributed technology.

MAJOR TECHNICAL CONTRIBUTIONS

Distributed Configuration Drift Detection Platform

In 2019, designed an internal platform comparing configuration states across development, staging and production environments. The system compared configuration metadata, detected deployment differences, identified inconsistent service configurations and generated environment-difference reports. Reportedly used across several internal projects.

Evidence currently available: architecture diagram, internal technical document, screenshots.

Missing: independent publication, patent, external validation, public product documentation.

Cloud Migration Architecture

Lead architect for a large enterprise migration from legacy infrastructure to cloud-native architecture. Claimed scope: 300+ services and 20+ engineering teams across multiple geographical regions. Reported outcomes include reduced deployment time, improved observability and infrastructure standardization.

Evidence: internal project documentation, architecture diagrams, manager confirmation.

Missing: independent evidence, public case study.

AI Infrastructure Optimization Framework

Designed an internal framework for estimating infrastructure requirements of large-scale machine-learning workloads. Considered model size, inference throughput, GPU utilization, latency, memory requirements and deployment architecture. The framework reportedly reduced infrastructure planning time.

Evidence: internal technical document only.

PUBLICATIONS

1. “Distributed Event Processing for Enterprise Data Platforms”

International Journal of Emerging Computing Systems, 2011.

Evidence: PDF copy and publication page. Unknown: indexing status, citation count and peer-review documentation.

2. “Cloud Migration Patterns for Distributed Enterprise Applications”

Technology blog, 2022. Author listed as Arjun Mehta.

Evidence: webpage. No evidence of peer review, citations or academic indexing.

PATENT / IP

“System and Method for Detecting Configuration Drift Across Distributed Enterprise Systems”

Patent application submitted in 2021. Status: pending / requires verification. Evidence: application number and filing document. No granted patent currently available.

AWARDS & RECOGNITION

GlobalTech Architecture Excellence Award — 2022. Internal award for contribution to cloud migration architecture.

Evidence: internal award certificate.

“Top Architect” Recognition — 2023. Internal company recognition. Evidence: HR recognition email.

PROFESSIONAL MEMBERSHIPS

IEEE member; ACM member; Cloud Native Computing Foundation community participant. No evidence that these memberships require demonstrated professional achievement for admission.

JUDGING / REVIEWING

University Hackathon Judge — 2024

Technical judge for a university-level software hackathon. Evidence: invitation email and event webpage.

Conference Reviewer — 2025

Claims to have reviewed two technical submissions for an international conference. Evidence: reviewer acknowledgement email. No independent public reviewer profile currently available.

SPEAKING & PRESENTATIONS

Guest Lecture — 2024

“Designing Reliable Cloud-Native Enterprise Systems.” Evidence: invitation, presentation slides and event photograph.

Technology Webinar — 2025

“Modernizing Legacy Enterprise Systems.” Evidence: webinar recording and organizer page.

MEDIA / EXTERNAL COVERAGE

Industry Interview — 2023

Technology publication interview: “How Enterprises Are Moving Beyond Legacy Infrastructure.” Evidence: article URL and publication metadata. Article contains approximately 300 words discussing his technical experience.

INTERNATIONAL EXPERIENCE

Worked on projects involving the United States, Germany, Singapore and India. The profile does not contain complete documentation establishing the exact corporate relationships between the foreign and U.S. entities.

MANAGEMENT & LEADERSHIP

Current role: Principal Technology Architect. Team influence: approximately 35 engineers across four teams. Direct reports: 8. Remaining engineers belong to adjacent teams. Budget authority is unclear; hiring authority is partial; performance-review authority is unclear.

COMPENSATION

Approximately ₹72 lakh/year. Evidence: employment contract and salary statements. No independent industry compensation benchmark has been attached.

EXTERNAL VISIBILITY

LinkedIn profile has approximately 18,000 followers. Technical posts have occasionally received 500–2,000 views and 50–150 reactions. No independent evidence currently establishes that this represents professional recognition within the field.

CLAIMS REQUIRING VERIFICATION

- “One of the world’s leading cloud architects.”
- “Designed a platform used by millions of users.”
- “Recognized among the top 1% of cloud architects globally.”
- “Architected one of the largest enterprise cloud migrations in Asia.”

Evidence for these statements is incomplete. These claims are intentionally included as test cases for claim verification, unsupported-superlative detection and evidence provenance.
