

Unrelated Professional Activity Note

IMPORTANT: This document is artificially generated for testing the VisaPilot evidence-reconciliation workflow. It is **not** an authentic employer, journal, conference, government, or third-party record and must not be presented as real evidence.

Evidence source type: Synthetic unrelated record

Claim selected for testing

This document intentionally does not support the selected contribution, judging, or publication claims.

Document content

For this synthetic negative-control test, the document records that Arjun Mehta attended an internal workplace safety orientation.

The activity concerns general workplace safety procedures and does not describe architecture contributions, judging of others' work, publication authorship, or any of the selected EB-1A claim topics.

VisaPilot should not treat this document as supporting the selected C5, C4, or C6 claims merely because the candidate name appears in the document.

Test metadata

Candidate	Arjun Mehta
Test relation	Negative control / irrelevant
Potential criterion	None
Status	Synthetic

Expected VisaPilot test behavior: this document should be treated as supporting material only after the system parses it, associates it with relevant claims, and reconciles the relationship. The synthetic label should remain visible to the human tester.
